SUMMARY

Fullstack Developer with hands-on experience building web applications end to end. I focus on creating scalable frontend architectures (monorepos, micro front-ends, shared component systems) and wiring them up with solid backends using Node.js and Express. I've worked on production projects handling multiple tenant instances and payment flows. Comfortable working across React, TypeScript, Astro and PostgreSQL, always aiming for clean, maintainable code that's easy to scale.

PROJECTS & EXPERIENCE

Online Raffle Platform - Micro Front-end Architecture

September 2025 | Maracay, Venezuela

- Built the entire frontend layer of a multi-tenant raffle platform where each client gets their own independently deployed instance with custom branding, all sharing the same codebase.
- Designed the monorepo architecture using Nx, organizing independent applications that deploy separately but reuse a shared component system built with Astro and Tailwind.
- Implemented ticket purchasing flows and payment processing, integrating business logic with Supabase as the backend (auth, database, and storage).
- The shared component system cut code duplication across platform instances, making it faster to spin up new tenants.

Stack: Astro, React, TypeScript, Nx, Tailwind CSS, Supabase

Aurum Restaurant - Premium Web Platform

August 2025 | Maracay, Venezuela

- Developed a full web platform for a luxury restaurant, covering both the frontend with smooth animations (GSAP, Swiper) and the backend with Node.js and Express.
- Built a reservations CRUD with robust validation using express-validator, making sure data hits the server clean and consistent.
- Designed the user experience to feel premium: smooth transitions, optimized image loading, and intuitive navigation throughout.

Stack: Astro, React, TypeScript, Node.js, Express, GSAP, Swiper

Personal Finance - Finance Tracking App

August 2025 | Maracay, Venezuela

- Created a web app where users can log income, expenses, and see their financial status in real time.
- Implemented full authentication with Firebase (sign up, login, password recovery) and global state management with React Redux.
- Integrated Google Sheets automation using Python to export financial data and generate reports.

Stack: React, TypeScript, Redux, Firebase, Python

TECHNICAL SKILLS

Frontend: React, Astro, TypeScript, JavaScript, Tailwind CSS, GSAP, Swiper, HTML/CSS

Backend: Node.js, Express, express-validator, REST APIs

Databases: PostgreSQL, Supabase, Firebase

State Management: React Redux, Context API

Tools: Git, GitHub, Nx (monorepos), Vercel, npm

Other: Python (automation), Google Sheets API

EDUCATION

Technical Degree in Commerce and Administrative Services - IT Specialization

FE Y ALEGRIA: Jacob Perez Carballo | 2012 - 2018 | Maracay, Venezuela

LANGUAGES

Spanish: Native | **English:** B1 (Intermediate) - Can read technical documentation and communicate in professional settings
